KEY BUSINESS INSIGHTS

- **Electronics is the top category.** Most of the revenue comes from Electronics, way more than any other category. This is good for sales, but it also means the business depends a lot on one category. Spreading sales more evenly across Furniture and Office Supplies could help lower that risk.
- **Greater Accra brings in the most money.** This makes sense since it's a bigger city with more customers. Other regions like Western and Ashanti are also doing well, so the same strategies used in Accra could work there too.
- **The HP Laptop is the best-selling product.** It brings in more revenue than the next two products combined. Because it's such a big earner, it's important to keep it in stock and not run out.
- **Most customers pay with Mobile Money (MoMo).** Over 40% of all payments are made this way, way more than any other method. This shows most customers prefer paying with their phones, so the checkout process should make MoMo easy and fast.
- **More than half of customers come back to buy again.** About 52% of customers made more than one purchase. That's a good sign — it means people like shopping here and are coming back.
- **A good number of orders don't have a payment method recorded.** About 15% of transactions are missing this info. This might be a small gap in how data is collected at checkout, and it's worth looking into.
